The battery energy storage market continues its rapid growth, reshaping power systems worldwide. After a historic 2025, when global BESS capacity surpassed 250 GW and overtook ...

A new analysis from energy think tank Ember shows that utility-scale battery storage costs have fallen to \$65 per megawatt-hour (MWh) as of October 2025 in markets outside China and the US.

No one's turning their back on solar, wind or EV, but for now, storage is what's gaining momentum. As a result, developers are reshuffling priorities and moving BESS projects to the front of ...

In an era of rapid technological advancement and increasing reliance on renewable energy, battery energy storage systems (BESS) are emerging as pivotal players in enhancing grid ...

U.S. Environmental Protection Agency (EPA) has entered into a settlement agreement with Gateway Energy Storage, LLC to direct cleanup in the wake of a lithium-ion battery fire that ...

Learn about the Energy Department's innovative research and development in different energy storage options.

Battery storage has many uses in power systems: it provides short-term energy shifting, delivers ancillary services, alleviates grid congestion and provides a means to expand access to electricity. ...

Breakthroughs in battery technology are transforming the global energy landscape, fueling the transition to clean energy and reshaping industries from transportation to utilities.

On Tuesday, American Clean Power, the clean energy industry trade group, announced a \$100bn commitment on behalf of the energy storage industry to manufacture and buy US-made ...
