-----

Elicio and BayWa r.e. have promised to deliver a 270-megawatt wind farm to add to the Belgian enterprise's growing portfolio as it operates not only in Belgium but also in France, Spain, ...

The offshore wind capacity is expected to deliver an average of 8 TWh renewable electricity per year. As a result, Belgium is currently in the global top five in terms of installed offshore ...

They will conduct research into the combination of marine technologies in Belgium's Exclusive Economic Zone, in particular to integrate Offshore Floating Photovoltaics (OFPV) into wind ...

Using Belgium's typical load profile and 2023 electricity prices, they combined a 5 MW offshore wind turbine and a 2 MW floating solar system with a 10 MWh Battery Energy Storage System...

With a relatively short coastline, Belgium has set ambitious goals ...

The Belgian Offshore Platform (BOP) is a non-profit association of investors and owners of wind farms in the Belgian part of the North Sea. The BOP was founded in 2011 to advocate the ...

With a relatively short coastline, Belgium has set ambitious goals to boost offshore energy capacity through wind and floating solar panels, the country's Deputy Prime Minister and ...

In a few years, Belgium could be the owner of the world's first artificial energy island. Forty-five kilometers off the coast of Belgium, an ambitious project is taking shape that will ...

In the SWiM project, six partners join forces to conduct research into the combination of marine technologies in the Belgian North Sea. The focus is on an ecologically sustainable integration ...

We first present the impact of floating solar panels on the surrounding circulation and turbulence field, assessed using a sub-grid scale parameterization. Results from different scenarios will be presented ...
