What is an off-grid inverter?

An 'Off Grid' or 'camping' inverter is a type of inverter that requires battery, wind, or solar power to function. It is commonly used off the grid and can be fixed or portable if small enough.

How much does an off-grid inverter cost?

An inverter converts direct current (DC) electricity into alternating current (AC) electricity. The price of an off-grid inverter will depend on the size of the system you have. A small 600 W inverter can cost you \$200 while a large 4,000 W inverter can cost you \$2,000. If we were to choose an AC refrigerator, this is the one we would choose.

What is a grid-tie microinverter?

This grid-tie microinverter has the unique advantage of using one inverter per solar panel so you can place modules on multiple roof faces, great for systems with shade problems.

How does a stand-alone inverter work?

Stand-alone Inverters convert DC power stored in batteries to AC power that can be used as needed. Selecting an inverter for your power system based on the maximum load you will be powering, the maximum surge required, output voltage required, input battery voltage and optional features needed.

Our comprehensive selection of off-grid power inverters, solar products, customized solar kits and batteries provide reliable power anywhere you need it.

Our off grid inverters support large-capacity battery banks and deliver pure sine wave output for sensitive equipment. As a wholesaler or contractor, you benefit from bulk availability, international ...
