Tariffs present both challenges and opportunities across the long duration energy storage market value chain. Domestic manufacturers benefit from reduced competition but must strategically ...

Proposed tariff increases on Chinese lithium-iron-phosphate (LFP) battery imports threaten to disrupt the United States" deployment of battery energy storage systems (BESS), a ...

Analysts see negative impacts across the board, but EV and battery energy storage industries seem particularly vulnerable to US President Donald Trump"s sweeping tariffs.

This briefing focuses on the tariffs affecting battery energy storage. Policy changes affecting the solar portion of the Section 301 tariffs are addressed in a separate briefing.

Tariffs on Chinese-origin lithium-ion non-EV batteries are scheduled to increase to 25% effective January 1, 2026. Otherwise, batteries of non-Chinese origin storage batteries have not been ...

Tariffs tripled On May 14, 2024, the Biden Administration announced changes to section 301 tariffs on Chinese products. For energy storage, Chinese lithium-ion batteries for non-EV ...

Explore how 2025 battery tariffs affect U.S. imports, energy storage, EV production, and sourcing strategies amid rising China tariffs and trade shifts.

New analysis from Clean Energy Associates (CEA) and Wood Mackenzie highlights the challenges facing the US battery storage market due to trade tariffs.

Tariff chaos reigns supreme in the development of the US stationary battery energy storage industry. Facing extraordinary tariffs of 145% on BESS imports into the country, developers ...

Does the export of energy storage batteries require tariffs

While Chinese EVs attract tariffs of 100% when exported to the U.S., China's streamlined supply chain mean they may remain competitive with U.S.-built EVs affected by the new battery tariffs.
