How good is Ireland's energy storage strategy?

Smith pointed out that Ireland's energy storage strategy, published in 2024, was "quite positive." A lot of high-level plans and a technology agnostic outlook. "Unfortunately, we haven't seen a lot of progress on those actions which is a problem we are trying to address," said Smith.

What is the energy storage system framework?

The framework emphasises that ESS are vital to supporting Ireland's transition to a renewable energy-led electricity grid. The framework highlights three core functions of electricity storage. Electricity storage systems 10 policy actions

Do electricity storage projects need planning permission?

Under the current Enduring Connection Policy (ECP), electricity storage projects need to secure planning permission before applying for a grid connection. The framework advocates for streamlining these processes to accelerate the deployment of storage projects and meet Ireland's climate goals.

What can we do to improve electricity storage technology?

Maintain a technology neutral approach to all electricity storage systems. Creation of a 'sandbox' project to advance both System Operators' technological knowledge of emerging electricity storage technologies. Convene an electricity storage and system services working group as part of the Accelerating Renewable Electricity Taskforce.

"The fundamentals for storage are really strong in Ireland, because we're a relatively isolated system on the periphery of Europe. As we get to 2030 and Ireland starts building lots of ...

Two memos setting out future plans for development of electricity storage, which will allow excess renewables to be stored and used when needed, and for private wires have been approved by...

The Department of the Environment, Climate and Communications has opened a consultation on electricity storage. The aim of this consultation is to gather the views of all interested ...

Chapter 4 of the Policy Framework provides an overview of the existing safety and regulatory framework in place for grid scale electricity storage systems, including battery electricity ...

Dublin new energy storage requirements

The Electricity Storage Policy Framework 2024, prepared by the Department of the Environment, Climate and Communications (DECC), provides a roadmap for integrating electricity ...

Under the proposed policies, new data centers connecting to the electricity network will be required to provide generation and/or storage capacity to match the requested connection ...

Looking ahead, the government plans to refine market mechanisms to sustain and expand energy storage capacity beyond 2030, ensuring that the grid's future needs are met while ...

Ireland has lifted a de facto ban on connecting new data centers to the electricity grid around Dublin -- a move that gives the industry long-awaited clarity on the requirements for building ...

The Government supports the potential for a portfolio of electricity storage technologies to be incorporated into the grid system based on system needs and the capacity to meet established ...

The Electricity Storage Policy Framework presents 10 government actions to support the role of electricity storage systems in Ireland's energy transition, identifying the key stakeholders and ...
