Can a conventional cement plant be used for solar thermal applications?

A conventional cement plant (Kotputli Cement Works (KCW), an UltraTech Cement Limited manufacturing unit) at Kotputli, Jaipur, Rajasthan, was investigated for solar thermal application. According to Indian Minerals Yearbook 2020, the plant produced 2.37 million tons, while the production capacity of the plant is 4 million tons.

How can solar energy help cement production?

Growth in cement production consumes a considerable amount of coal for fulfilling the thermal energy requirement which ultimately produces a lot of greenhouse gases to the atmosphere. So, there must be some renewable sources of energy like solar energy which can fulfill the thermal energy needs for cement production.

Which approach is used for providing solar energy?

Approach used for providing solar energy includes the utilisation of a solar tower system with a solar reactor atop the solar tower or preheater tower in a conventional cement plant. Analysis considered thermal energy substitution ranging from 100% to 50%.

How to integrate CST Technology in a conventional cement plant?

Best approach to integrating the CST technology in a conventional cement plant is to use solar tower system with solar reactor at the top of the solar tower or preheater tower. Additionally, the use of non-conventional sources of energy in cement production reduces a lot of anthropogenic emissions to the atmosphere.

The arrangement and selection of PV modules in the cement plant, the electrical design of PV power station, and the construction organization plan are proposed.

The battery storage works in conjunction with a 42MW waste heat recovery (WHR) unit, a 8MWp solar photovoltaic unit and a proprietary energy management system. It is expected to store ...

Exchange and cooperation on photovoltaic energy storage cabinet for cement plants

Discover our high-efficiency, modular battery systems with zero capacity loss and rapid multi-cabinet response. Ideal for industrial, commercial, and emergency applications, our solutions offer remote ...

On-site battery energy storage systems, with or without solar PV, are an effective way to reduce cement facilities" electricity costs while also reducing carbon footprints.

Taking advantage of the favorable operating efficiencies, photovoltaic (PV) with Battery Energy Storage (BES) technology becomes a viable option for improving the reliability ...

In its annual report for 2022 Taiwan Cement said it was planning to using NHOA"s technology to build seven other large-scale energy storage projects at sites in Taiwan including its ...

This article explores how cement is being applied in renewable energy storage, highlighting innovations in thermal, electrical, and chemical storage solutions that could reshape the ...

In the present work, the authors have attempted to design a solar cement plant for supplying solar energy to the cement industry. A case study was done, which investigated a ...

The increasing priority of decarbonization and corporate ESG (environmental, social, and governance) performance create a unique opportunity for the cement indu

On the basis of a solar calciner test rig built at the German Aerospace Center (DLR), a solar cement plant is designed and the heliostat field is calculated. The energy balance in the solar...
