Eland 1 & 2, a 758-megawatt (MW) solar farm with a 300 MW/1,200 MWh battery storage system, is now online in Mojave, California.

Siting solar on these lands allows soil to "rest" while providing significant payments to landowners. And by leasing portions of their land to solar developers, many farmers have the financial stability to ...

As battery densities improve by 8-12% annually, today's energy storage project land needs might shrink faster than polar ice caps. But for now, smart planning remains crucial.

By utilising energy storage, farms can take advantage of off-peak rates by storing energy when it's cheaper and using it during peak hours, leading to considerable cost savings. By adopting energy ...

On June 11, the California Energy Commission officially approved the Darden Clean Energy Project, a sprawling solar farm and battery storage facility proposed for a stretch of fallow ...

Local leaders and clean energy experts gathered Tuesday beneath a blazing desert sun to mark the initiation of full production from 1.36 million solar panels and 172 lithium iron phosphate...

The world's largest solar and battery storage project is breaking ground in Fresno County, after the California Energy Commission approved the Darden Clean Energy Project. The facility will be...

The photo shows the energy storage station supporting the Ningdong Composite Photovoltaic Base Project. This energy storage station is one of the first batch of projects supporting the 100 GW large ...

As renewable energy accelerates globally, the competition between energy storage projects and agricultural land has become a hot-button issue. Can we sustainably expand clean energy ...

Farmland energy storage power station project

DCEP will be built on 9,500 acres of land in western Fresno County that is no longer able to support agricultural production. The project includes a 1,150-megawatt (MW) solar facility with ...
