Distributed Energy Resources (DERs) are small, modular energy generation and storage technologies that provide electric capacity or energy where it is needed.

Welcome to the new frontier of grid reliability: the rise of residential Distributed Energy Resources (DERs). DERs are transforming the way energy is generated, stored, and consumed.

Without consistent policy support, subsidies, or favorable tariff models, many businesses hesitate to commit. What's needed is a holistic push--from government, technology providers, and ...

Distributed generation refers to the production of electricity from small-scale sources located close to where it will be used. These sources are often renewable, like solar panels, wind ...

Distributed generation (DG) is typically referred to as electricity produced closer to the point of use. It is also known as decentralized generation, on-site generation, or distributed energy - can ...

DERs, which are typically installed where the electricity is needed--a home, business, or industrial site--can lower energy costs, reduce pollution, and help communities keep the lights on ...
