25 I need to replace a part of a string in Javascript. The following example should clarify what I mean.

58 There's no need to use `replace` for this. What you have is an encoded string (using the `string_escape` encoding) and you want to decode it:

7 This function uses both the `str.replace()` and `replaceAll()` functions. It will replace all occurrences of `pattern` in `string` with `repl` in a case-insensitive way.

When replacing all occurrences of `aba` in `ababa` with `ca`, which result do you expect? `caba?` `abca?` `cca?`

ECMAScript 2021 has added a new `String` function `replaceAll`. A long time ago in a galaxy not so far away, people used `split + join` or regular expressions to replace all occurrences of a string. I ...

119 In order to replace text using a regular expression, use the `replace` function: `sub(pattern, repl, string [, count, flags])`. It will replace non-overlapping instances of `pattern` by the text passed as `string`.

What's the difference between `java.lang.String`'s `replace()` and `replaceAll()` methods, other than the latter uses regex? For simple substitutions like, replace `.` with `/`, is there any difference?

The `string.replace()` is deprecated on Python 3.x. What is the new way of doing this?

0 You can use the following function to replace a character or string at a particular position of a string. To replace all the following match cases, use `String.prototype.replaceAllMatches()` function.

160 If you want to replace multiple characters, you can call the `String.prototype.replace()` with the replacement argument being a function that gets called for each match. All you need is an object ...
