How do you store a lead acid battery?

Never use water to extinguish a battery fire, as it can spread the fire or cause an explosion. Safe Storage: Store lead acid batteries in a cool, dry, and well-ventilated area away from flammable materials. Keep batteries secured and prevent them from tipping, as this can cause damage to the battery casing and potential acid leakage.

How to maintain a lead acid battery?

By implementing these cleaning and maintenance tips, you can prolong the lifespan of your lead acid batteries and ensure that they continue to deliver reliable performance over time. When storing lead acid batteries, make sure to keep them in a cool, dry place and avoid extreme temperatures.

How long can a sealed lead-acid battery be stored?

A sealed lead-acid battery can be stored for up to 2 years. During that period, it is vital to check the voltage and charge it when the battery drops to 70%. Low charge increases the possibility of sulfation. Storage temperature greatly affects SLA batteries. The best temperature for battery storage is 15°C (59°F).

Which SOC is best for storing lead acid batteries?

The ideal SOC for storing lead acid batteries is around 50%. Storing the batteries at full charge or completely discharged can lead to sulfation, a process where lead sulfate crystals form on the plates, gradually reducing the battery's capacity and overall performance.

Sealed lead acid batteries need to be kept above 70% State of Charge (SoC). If you are storing your batteries at the ideal temperature and humidity levels then a general rule of thumb would ...

In summary, while SLA sealed lead acid batteries do not strictly require a battery box for safe indoor installation, using one is advisable. It enhances safety, protection, and efficiency.

As long as the exposure was brief and there is no visible rust, corrosion or other damage on the battery, it's okay to dry them thoroughly and return them to storage. But if batteries are visibly damaged, it's ...
