The Solar System provides the only known example of a habitable planet, the only star we can observe close-up, and the only worlds we can visit with space probes. Solar System research is essential for ...

All this information is scrutinized in attempts to understand in detail the origin and evolution of the solar system--a goal toward which astronomers continue to make great strides.

OverviewGeneral characteristicsDefinitionFormation and evolutionSunInner Solar SystemOuter Solar SystemTrans-Neptunian regionAstronomers sometimes divide the Solar System structure into separate regions. The inner Solar System includes Mercury, Venus, Earth, Mars, and the bodies in the asteroid belt. The outer Solar System includes Jupiter, Saturn, Uranus, Neptune, and the bodies in the Kuiper belt. Since the discovery of the Kuiper belt, the outermost parts of the Solar System are considered a distinct region consisting of the objects beyond Neptune

These ancient rocks provide a glimpse into the early days of our cosmic neighborhood and help us understand how it has evolved over billions of years. The solar system's history is ...

If you were to look at a giant picture of space, zoom in on the Milky Way galaxy, and then zoom in again on one of its outer spiral arms, you'd find the solar system.

To understand the solar system is to understand ourselves--where we came from, what we are made of, and where we might go. It's a story written in starlight, craters, and the silent pull of ...

At the core of space exploration lies the study of our solar system, a cosmic laboratory revealing intricate details about the forces that govern Earth. By scrutinizing other planets, scientists ...

Since the interstellar comet was discovered July 1, a dozen NASA assets have captured and processed imagery of the icy interloper, and several others will have opportunities to capture ...

Is the solar system good

The Solar System remains in a relatively stable, slowly evolving state by following isolated, gravitationally bound orbits around the Sun. [38] Although the Solar System has been fairly stable for ...

Our solar system includes the Sun, eight planets, five officially named dwarf planets, hundreds of moons, and thousands of asteroids and comets. Our solar system is located in the Milky ...
