LNG fueling stations are facilities built specifically to store and dispense liquefied natural gas for vehicles, offering a cleaner and often more affordable alternative to diesel.

LNG storage enables a reliable supply of natural gas in areas where pipeline capacity limitations and weather conditions may cause supply and demand discrepancies, notably in the ...

Dominion Energy, Virginia's largest utility company, has recently received approval from state regulators to construct a liquefied natural gas (LNG) storage facility for two of its gas-fired power ...

LNG is natural gas that has been cooled to a liquid state at about -162°C (-260°F). This process reduces its volume by around 600 times, making it easier and safer to store and transport.

Below, you'll find a clear explanation of what LNG is, the main uses of liquefied natural gas, and the best types of LNG tanks for safe and efficient storage.

Liquefied natural gas (LNG) is natural gas that has been cooled to a liquid state, at about -260°F; Fahrenheit, for shipping and storage. The volume of natural gas in its liquid state is about 600 times ...

To avoid fuel shortages during extreme weather or other supply disruptions or constraints, Dominion Energy is adding liquefied natural gas (LNG) fuel storage at Greenville County Power Station.

We plan to construct a liquefied natural gas (LNG) storage facility near our Riverside Energy Center campus in Rock County, Wisconsin. This LNG facility can directly serve our natural gas customers ...

Virginia's largest utility received approval from its state regulators to construct a liquefied natural gas storage facility for two of its gas-fired power stations in the Southside region of...
