-----

Africa is home to 60% of the best solar resources globally, yet only 3% of its electricity generation was met with solar PV in 2023. The new report provides new analysis on current market ...

Recent trends indicate that solar power prices are becoming increasingly favorable. This transformation reflects broader global shifts towards renewable energy and is particularly critical for ...

According to a new report from Ember, several countries on the African continent are now going solar in a big way! Here are some extracts from the report showing that the first evidence of a...

The levelized cost of electricity (LCOE) for utility-scale solar PV in Africa has fallen to as low as USD 0.035/kWh in optimal locations, making it the cheapest source of new electricity ...

TPES per capita on the continent is among the lowest in the world, at around 0.7 tonnes of energy equivalent (toe) per capita (0.6 toe/capita in sub-Saharan Africa) (IEA, 2014a). It is around ...

As the battery costs continues to fall by an expected 10 % or more per year, the competitiveness of solar PV plus storage will improve radically, especially in Africa where so many ...

The Africa Market Outlook for Solar PV 2025-2028 released in March by the Global Solar Council offers a timely and comprehensive overview of this evolution. ESI Africa cherry-picks ...

The report discusses challenges in policy making and proposes a co-ordinated effort to collect data on the installed costs of solar PV in Africa, across all market segments.

The following table highlights the top 10 African solar markets by new solar installations (%) in 2024, reflecting the continent's evolving energy landscape and the growing role of solar...
