US battery storage hits record 5.6 GW in Q2 2025, led by utility-scale growth, but sourcing rules may slow future gains.

Over the last few years, the rise in electric vehicles (EVs) helped drive down the costs of batteries as manufacturers scaled up to meet demand. The combination of benefits, incentives, and improving ...

International shipping and logistics challenges, exacerbated by global supply chain disruptions, have increased lead times and costs for specialized cabinet components.

Innovation reduces total capital costs of battery storage by up to 40% in the power sector by 2030 in the Stated Policies Scenario. This renders battery storage paired with solar PV one of the most ...

This amount represents an almost 30% increase from 2024 when 48.6 GW of capacity was installed, the largest capacity installation in a single year since 2002. Together, solar and battery ...

Each cabinet contains 20 new lithium-ion batteries that, starting this spring, will feed power into California's often-strained electrical grid, helping prevent blackouts. They're essentially...

by an agency of the U.S. Government. Neither the U.S. Government nor any agency thereof, nor any of their employees, makes any warranty, expressed or implied, or assumes any legal liability or ...

Global energy storage battery shipments are projected to reach 392 GWh in 2025, up from 314.7 GWh in 2024 [2] [9]. That's like replacing every AA battery in your junk drawer with ...

The US Energy Information Administration (EIA) says that battery storage capacity grew by 13,809 MW in the past 12 months and is projected to expand by another 22,053 MW as solar ...

Power battery and solar battery cabinet shipments increased

Technology locked in Lithium iron phosphate (LFP) remains the prevalent lithium-ion battery chemistry in the stationary energy storage market. Chinese battery makers, which specialize ...
