What is Italy's largest energy storage system based on used batteries?

Italy's largest energy storage system based on used batteries for electric vehicles was inaugurated on Tuesday at Rome's Fiumicino airport to help it reduce carbon emissions.

What are the innovative features of the energy storage system?

An additional innovative feature relates to the development of equipment able to check the state-of-health of the batteries before their connection to the system. The energy storage system will have a rated capacity of 2.5MW/10MWh. New battery construction will be avoided due to the project.

What is a 5 MW energy storage system?

The energy storage system with a rated output of 5 MW and a capacity of 10 MWh will be designed, built, put into operation and operated out of used vehicle batteries from different vehicle manufacturers. This has the advantage of reducing procurement risk while increasing the modularity of the system.

Can ADR integrate battery storage and solar PV?

Once the project is complete, AdR has already planned to install additional solar PV and storage systems on the same site. The integration of the battery storage sector with other relevant sectors, such as automotive and the energy sector (generation, transmission and distribution) opens new and flexible opportunities.

The inauguration of the largest energy storage facility using second-life batteries in Italy marks a turning point in the decarbonization of the Fiumicino airport hub.

The project will be developed at Rome Fiumicino International airport and the energy stored will cover evening peak-demand, while also providing flexibility services to the grid.

ADR announced the arrival of Italy's largest battery storage at Fiumicino Airport, on June 3, 2025. This equipment integrates second-use batteries from three different automotive brands, ...

As part of the PIONEER project, a commercial use case for 2nd-life batteries in combination with a 30 MWp

Rome 5g communication energy storage solar energy storage cabinet lithium battery project

PV system to power the 'Leonardo da Vinci' international airport in Rome Fiumicino will be ...

An innovative energy storage system is helping Rome Fiumicino International Airport (FCO) harness renewable energy more effectively, capturing power for use even when the sun isn't ...

Now, imagine entire 5G towers facing the same struggle. That's where communication lithium battery energy storage steps in - it's like giving our digital world a double-shot espresso for ...

Italy's largest energy storage system based on used batteries for electric vehicles was inaugurated on Tuesday at Rome's Fiumicino airport to help it reduce carbon emissions.

Europe's largest airport solar-battery integration, boosting energy resilience and circular economy leadership. Rome's Fiumicino International Airport has launched Pioneer, Europe's largest ...

High-efficiency Mobile Solar PV Container with foldable solar panels, advanced lithium battery storage (100-500kWh) and smart energy management. Ideal for remote areas, emergency ...

According to the partners, it is the largest energy storage system using hybrid second-life batteries in Italy, and one of the largest in Europe. Pioneer is projected to save 16,000 tons of CO 2 ...
