France is aiming to increase its solar PV capacity from 11.5 GW in March 2021 to 23 GW by the end of 2023. The country offers feed-in tariffs for small-scale solar PV up to 100 kWp on rooftops for self-consumption, with a specific grid tariff for collective users and exemption from the domestic tax on electricity for projects under 1 MW. However, a proposal to reduce solar PV subsidies for ongoing projects until 2030 has created controversy, affecting the sector's growth despite the target of reachin...

In 2023, the PV energy capacity in France amounted to approximately 20.5 gigawatts, making France the fifth European country for cumulative PV capacity that year. Despite this high ...

France added 4.6 GW of new solar capacity in 2024, pushing its total to 22.1 GW. With ambitious targets set for 2030 and beyond, the country is ramping up ground-mounted and rooftop ...

Solar photovoltaic systems can now be installed along major roads and highways, on coastal wastelands, and on parking lots. A revised version of the initial MAEP, adopted in spring 2020, ...

In recent years, the French solar PV market has been driven by a combination of government incentives, such as feed-in tariffs and auctions, and declining costs for solar PV technology.

In 2024, France set a new benchmark for PV deployment, installing over 6 GW of new PV capacity. This marks the strongest year on record for PV in France, underscoring the country's commitment to ...

Between the application of the reduced VAT and the retroactive reduction in solar subsidies, a delay of eight months could spell disaster for the small-scale self-consumption power ...

This graph provides an annual and monthly overview of solar power generation in France. The evolution of solar photovoltaic generation is an important parameter in the energy transition, as it is a ...

Small-scale solar power generation system in france

On 27 March, the French government formalised a decree modifying the purchase conditions for electricity generated from small-scale photovoltaic systems, defined as installations with a capacity of ...

The country offers feed-in tariffs for small-scale solar PV up to 100 kWp on rooftops for self-consumption, with a specific grid tariff for collective users and exemption from the domestic tax on electricity for ...
