Increases in the energy density of sodium-ion batteries means they are now suitable for stationary energy storage and low-performance electric vehicles. The abundance of raw material for making ...

Peak Energy activates a first-of-its-kind sodium-ion battery in Colorado, aiming to cut energy costs and boost US grid reliability.

New sodium-ion batteries are pouring into the global market, with US-based Unigrid among those contending for international energy storage off-takers (cropped, courtesy of Unigrid).

Much of the attraction to sodium (Na) batteries as candidates for large-scale energy storage stems from the fact that as the sixth most abundant element in the Earth's crust and the fourth most abundant ...

Sodium-ion batteries (SIBs) have emerged as a promising alternative to lithium-ion batteries (LIBs) due to the abundance, cost-effectiveness, and environmental benefits of sodium ...

Suited for stationary energy storage applications Sodium-ion batteries are poised to replace lead-acid cells in combustion engines and support stationary energy storage, where safety and cost matter most.

Storing clean energy generated by solar and wind has long been a challenge. Sodium-ion batteries, with their low cost, enhanced thermal stability, and long cycle life, are an attractive...

SMBs, or sodium metal batteries, have long been considered a promising candidate for grid-scale energy storage, thanks to their use of the inexpensive and widely available element - salt.

Sodium-ion batteries are emerging as a safer, lower-cost alternative to lithium-ion, with a recent international study highlighting their competitiveness in stationary energy storage. The ...

Sodium batteries begin to be used in energy storage projects

American battery startup Peak Energy and energy developer Jupiter Power have teamed up to deploy grid-scale sodium-ion batteries. It's a big step forward for the nascent--and in some ways,...
