How many megawatts of energy storage were installed in Europe in 2024?

Historic and forecasted megawatt installs of energy storage across Europe. Image: EASE /LCP Delta. A total of 11.9GW of energy storage across all scales and technologies was installed in Europe in 2024, bringing cumulative installations to 89GW.

Is energy storage a good investment in Europe?

Compared to classic renewables, energy storage has really only become an investable asset in Europe over the last few years on the back of technology advances, market price signals, and government support mechanisms.

How many battery energy storage systems were installed in Europe in 2024?

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record-breaking installations, and bringing Europe's total battery fleet to 61.1 GWh. However, the annual growth rate slowed down to 15% in 2024, after three consecutive years of doubling newly added capacity.

What percentage of Europe's energy storage capacity is pumped hydro?

However, despite an exponential growth in Europe's battery energy storage capacity, which reached 36 gigawatt-hours in 2023, pumped hydro still accounted for 90 percent of the electricity storage capacity in the European Union that year.

The study shows that this approach is not only cost-effective, but also limits fiscal risks and enables the development of a diverse storage landscape in Europe.

The key facts on energy storage illustrate where there is a need for increased flexibility in the electricity system and what we are aiming to achieve by 2030 and 2050 respectively.

A total of 11.9GW of energy storage across all scales and technologies was installed in Europe in 2024, LCP Delta has said.

In the most-likely scenario for 2025, 29.7 GWh of battery storage will be installed in Europe, representing a 36% annual growth. By 2029, the report anticipates a sixfold increase to ...

Western european energy storage electricity budget

The study highlights the recent Clean Industrial Deal with new state aid rules and the Affordable Energy Action Plan as promising for driving energy storage deployments in Europe - ...

Energy storage will reach beyond 215 GW by 2030 - with battery storage alone exceeding 160 GW. By the end of the decade, storage will be deployed at a rate of 20-25GW per year, which is more than ...

Discover all statistics and data on Energy storage in Europe now on statista !

Energy Storage: As renewable energy grows, Europe is investing in energy storage technologies, such as batteries and pumped hydro storage, to manage intermittent energy from wind and ...

How much energy storage capacity is required to shift a country's energy is a function of the total electricity demand, power stack, and renewables penetration.

Let's face it: Europe's energy storage game is getting hotter than a Tesla battery during peak discharge. With operated battery storage capacity now exceeding 20GW [1], the continent is rewriting the rules ...
