A wind turbine consists of five main parts and many smaller parts. The main components are the foundation, the tower, the rotor and hub (including three blades), the nacelle, and the generator.

## Wind turbine consists of a system

A wind turbine is a device that converts the kinetic energy of wind into electrical energy. As of 2020, hundreds of thousands of large turbines, in installations known as wind farms, were generating over 650 gigawatts of power, with 60 GW added each year. Wind turbines are an increasingly important source of intermittent renewable energy, and are used in many countries to lower energy costs and reduce reliance on fossil fuels. On...
